

CHALLENGE THE PRESENT TO MAKE THE FUTURE POSSIBLE

ACCIONA is a global leader in sustainable infrastructure and renewable energy solutions.

Our people are empowered to be innovative, to demonstrate technical excellence, and to deliver infrastructure solutions across energy, water, and transport.

Across our business the decisions we make every day are with the aim of contributing to a more positive society.

AUSTRALIA AND NEW ZEALAND

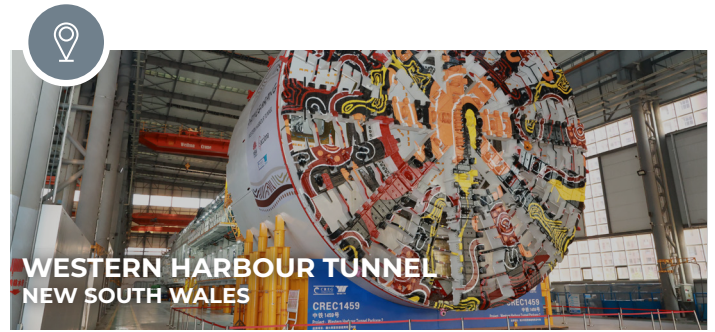

In Australia and New Zealand, ACCIONA has evolved from a rich history of local companies, companies built on family values, who have delivered complex, sustainable, and iconic projects across this country for over 100 years. With a business that spans the entire value chain, from design and construction through to operation and maintenance, we combine our deep local knowledge with global experience to deliver a broad portfolio of sustainable infrastructure solutions, now and into the future, that are enhancing the lives of the community.

CURRENT PROJECTS IN AUSTRALIA AND NEW ZEALAND

Led by ACCIONA, in alliance with Water Corporation and Jacobs, the Alkimos Desalination plant project involves designing, building, operating, and maintaining a state-of-the-art desalination facility to secure a climate-resilient water supply for millions of Western Australians.

Western Harbour Tunnel is a major transport infrastructure project that will make it easier, faster and safer to travel around Sydney. The project uses Tunnel Boring Machines that are among the largest in the Southern Hemisphere.

ACERZ—a consortium of ACCIONA, COBRA, and Endeavour Energy—has been selected to design, build, finance, operate, and maintain the Central-West Orana Renewable Energy Zone (CWO REZ) transmission network, which will span 420 km to link multiple renewable energy facilities to the grid.

Rookwood Weir is a landmark project that provides valuable water which will underpin agricultural, industrial and urban growth in Central Queensland. The project is a leader in its commitment to deliver sustainable infrastructure solutions.

Completed in 2024, ACCIONA led the \$253 million Bayswater Station upgrade in Perth under METRONET. The station was elevated and relocated to enhance safety and accessibility. It now serves as a multi-modal hub integrating three major rail lines and earned a 6 Star Green certification for its world-class sustainable design.

KER is Australia's first commercial-scale thermal waste-to-energy plant. Built and operated by ACCIONA in Perth, it will divert up to 460,000 tonnes of landfill waste annually and supply 38 MW of baseload power to the Western Power grid under a 25-year maintenance agreement.

The Adelaide Desalination Plant was constructed to safeguard urban water supplies and ensure that sufficient water is available to meet Adelaide's needs in extremely dry years. The plant was built following the Millennium Drought to provide a source of water which is not dependent on the climate.

Opened in June 2023, this 18.5km four-lane motorway will contribute to the economic growth of the Northland region and provides a more reliable and secure transportation link between Auckland to Warkworth.
